

Brooklyn Trade Services

Biometric Access Solutions for Vehicles

The Company

Brooklyn Trade Services is a Sydney based security installation business that specializes in residential and commercial security and access control installations with multiple vans on the road.

The Problem

With multiple vans and tradesmen on site and expensive stock and tools in each van, owner Scott Hanson was searching for a convenient and secure way to allow his staff access to any vehicle without the down time of having to go search for the staff member who last had the keys to a specific vehicle. Scott, who had previously installed BioLock on residential and commercial applications then approached BRS to discuss the possibility of using BioLock as a means of securing entry to cargo areas of his vans.

The Solution

BioLock is a robust, IP65 rated biometric reader and secure relay board. Scott has mounted BioLocks to the rear cargo access of his vans and enrolled his staff, and the BioLock is linked to the vehicle central locking and alarm system. Scott now has all his staff enrolled in each vehicle.

The Benefits

- Drivers retain vehicle keys – access to the vehicle's cargo area is done using fingerprints.
- Any authorized staff can get access at any time – greater on site efficiencies and accountability.
- Full audit trail available regarding who and when access was granted. Vital for tracking stock and tools.

Scott Hansen says on BioLock:

"User friendly operation has reduced down time considerably on large scale jobs...."

"We all know what it's like when the apprentice has gone off with the keys!"
